Preface

Each year the Economic Regulation Group (ERG) of the Civil Aviation Authority produces a report of the findings the survey it conducts with departing air passengers at UK airports. This publication covers the five airports where CAA works continuously (Gatwick, Heathrow, Luton, Manchester and Stansted) together with London City and airports in the midlands, southwest and northwest where one-year projects were undertaken.

This year we have increased the coverage of this publication and hope that readers will find it of interest. It is possible to produce tailor-made reports from the survey that examine the market down to an individual route level.

Please contact us on surveys@caaerg.org.uk for more information. As with earlier publications, we would ask readers who have corrections or comments to also contact us.

The Role of ERG

One of ERG's Purposes and Aims is to provide statistical data that enables airlines, airports and other users to respond to demand. The Departing Passenger Survey provides comprehensive information on the nature of the passenger market at UK airports. It supports a wide range of analysis from forecasting air transport activity through to informing government policy.

While the survey, naturally, has a UK focus, a number of airline operators make use of survey research to better understand global interline patterns, in particular London hub and spoke activities.

The success or failure of an air passenger survey depends to a large extent on the help and co-operation of the people on the spot. This involves not only the expertise of the interviewer and the willingness of the passenger to be interviewed, but also the attitude of airport staff, airline staff, immigration officers, security officials and others towards the presence of interviewers within or near their own working areas.

We would like to thank them for the assistance they gave towards the smooth running of the 2004 survey.

Chapter 1

Introduction

This report covers the airports Gatwick, Heathrow, Luton, Manchester and Stansted. Definitions of all terms used throughout this report appear in the Appendix section.

In the Beginning

Since 1968 a series of surveys has been undertaken to obtain information about air travellers and the determinants of the travel market. These surveys have been designed to obtain information of a kind that could not be collected on a routine basis from the air transport industry. The surveys have included questions on journey purpose, final and intermediate surface origins/destinations, means of transport to and from airports, route flown, country of residence and income. This information is used in assessing the type of market served by airports and consequently for forecasting air transport demand and for planning airport facilities.

Cycles of surveys were undertaken at major UK airports in the periods 1970-1972, 1975-1978, 1982-1987 and 1990-1996. Each cycle covered, by sample, 95% of terminal passengers in the UK and normally surveys were arranged so that airports in the same broad regions were surveyed at the same time.

Continuous Surveys

Following the 1996 survey run at five London airports, Birmingham, Manchester and four Scottish Airports demand built up for more regular survey data. After a consultation process with all interested parties, it was decided to run a survey each year at Gatwick, Heathrow and Manchester Airports so long as sufficient sponsorship is forthcoming. Joining these Continuous Airports in 2001 were Luton and Stansted.

In parallel with the Continuous Survey, the Authority embarked upon a three-year Regional cycle, which began in 1999. Reports on each of these surveys are also available. For further information regarding frequency and scope of CAA Surveys, the interested reader should refer to the history section found in Appendix E.

2004 Survey

In planning the 2004 survey of air passengers, a principal concern was to derive maximum value from the information collected, but at the same time to minimize passenger inconvenience. Therefore, in order to cause as little disruption to passenger flow as possible, it was necessary to impose a constraint on questionnaire length and content. To cause minimum inconvenience, most passengers were interviewed whilst waiting to board their aircraft.

The Authority used its own field-force, managing the project from London. Shifts in each month were carefully structured so that all scheduled routes and, in most cases, all flights within a route were regularly sampled. The sampling procedure, which was usually a form of systematic random sampling, is fully described in the Appendix B.

Several interested parties were consulted over the content of the questionnaire, including government departments and airport and airline management groups. The questionnaire was similar to previous survey questionnaires in that the same basic questions appeared but some new questions were included specifically for the co-sponsors of the survey.

Sample questionnaires used throughout the survey are reproduced in the Appendices

Chapter 2

Gatwick Airport

Introduction

Gatwick Airport, operated by BAA, is situated about 30 miles to the South East of London.

Traffic Patterns ^(T1-T2)

Gatwick Airport handled just over 30.8 million passengers in 2004, 12.5% on domestic and 87.5% on international services. This compares with the 29.2 million reported during 2003, which comprised of 13% domestic and 87% international.

Passenger Profile ^(T3-T5)

86% of passengers using Gatwick were terminating in 2004 compared with the 84% reported in 2003.

Leisure traffic continued to dominate Gatwick, with around 84% of all passengers travelling in 2004 reporting they were flying for leisure purposes, a slight increase from the 83% recorded the year before.

Business traffic accounted for the remaining 16% in 2004.

Surface Origin ^(T6-T8)

Gatwick Airport is served directly by the M23, which in turn has arterial connections to a number of other motorways.

The majority of terminating passengers using Gatwick Airport begin their surface journey from the South East planning region. In fact the proportion of terminating passengers originating from the South East have only marginally changed from 82% in 2003 to 83% in 2004. The South West and East Anglia planning regions account for the majority of remaining terminating traffic.

Surface Access Modes ^(T9)

Passengers travelling to Gatwick by surface means have a number of options available to them. The proportion of passengers electing to arrive by private car has remained largely unaltered since 2003 at around 51% as has taxi usage fixed at around 15%.

Use of the Gatwick Express has slightly increased since 2003 from 14.5% to 15% with a corresponding fall in bus usage.

Trip Length ^(T15)

The average trip length of UK business passengers travelling on international scheduled services was just over 5 days, with around 8% having a trip length of 24 hours or less.

Over 37% of UK business passengers travelling on domestic services were taking trips of 24 hours or less, a fall from the 45% recorded during 2003.

Not surprisingly leisure passengers' trips were longer than their business counterparts, with over 50% of UK holiday makers travelling on scheduled international services being away between one and two weeks.

Income and Socio-Economic Group ^(T16, T17)

Foreign business passengers on domestic trips had slightly higher average incomes (£72,049) than their UK counterparts (£61,173).

Just over 54% of UK business passengers using the airport came from socio-economic groups A/B and around 41% from the C1 group. For UK leisure passengers 36% came from the A/B socio-economic group with around 38% coming from the C1 group. Generally there proportions observed seem largely unaltered from 2003.

Family Make-Up ^(T18)

Considering all UK leisure passengers, irrespective of the service they take, 25% reported that they had children under the age of 16 years.

Business Travel ^(T19)

Around 36% of foreign business passengers were working in the production industries, this represents an increase from 31% recorded during 2003. The proportion of UK business passengers from this sector also increased this time from 24% in 2003 to 28% in 2004.

The proportion of UK passengers travelling in the public service sector rose from 17% in 2003 to 22% last year. There was a corresponding fall in those employed in the Transport & Communications sector, down from 22% to 13%.

Journey Purpose and Sex of Passenger ^(T20, T21)

In 2003, travelling on international services, 74% of foreign passengers were travelling on leisure and 26% on business. By 2004 the proportion of foreign passengers travelling on business (domestic and international) had increased slightly from 38% to 39% with a corresponding change in leisure passengers.

Age ^(T23)

The average age of UK leisure passengers was 42 as were their foreign leisure counterparts.

The average age of UK business passengers was just under 42 while their foreign business counterparts were slightly above 42. As was reported in 2003, UK business passengers in the "35-44" age group continued to dominate, accounting for just over 31%.

First Time Fliers ^(T34)

The highest proportion of first time fliers at Gatwick could be found in charter Inclusive tour services, with slightly over 1% of traffic flying for the first time.

Chapter 3

Heathrow Airport

Introduction

Heathrow Airport, operated by BAA, is situated about 15 miles to the West of London.

Traffic Patterns ^(T1-T2)

Heathrow Airport handled just over 66.9 million passengers in 2004, 10.3% on domestic and 89.7% on international services. This compares with the 63 million reported during 2003, which comprised of 10.5% domestic and 89.5% international.

Passenger Profile ^(T3-T5)

65% of passengers using Heathrow were terminating in 2004 compared with the 64% recorded in 2003.

Of the Continuous London Airports, Heathrow catered for the largest proportion of business traffic, with around 36% of all passengers travelling in 2004 reporting they were flying for business purposes, a small increase from the 35% recorded in 2003.

Surface Origin ^(T6-T8)

Heathrow Airport is served directly by the M25 and M4, which in turn both have arterial connections to a number of motorways and A class roads.

The majority of terminating passengers using Heathrow Airport begin their surface journey from the South East planning region. In fact the proportion of terminating passengers originating from the South East have only marginally changed from 82% in 2003 to 83% in 2004. The South West and East Midlands planning regions account for the majority of remaining terminating traffic.

Surface Access Modes ^(T9)

Private car usage appears to have fallen slightly since 2003 from 36% to the 35% reported during 2004. This in turn has been offset by a marginal increase in the proportion of passengers using Taxi/Minicab and the Heathrow Express.

The proportion of Piccadilly Line users seem largely unaltered at 14%.

Trip Length ^(T15)

The average trip length of UK business passengers travelling on international scheduled services was just under 6 days, with around 15% having a trip length of 24 hours or less.

Around half of UK business passengers travelling on domestic services were taking trips of 24 hours or less, on a par with the figure recorded during 2003.

Foreign passengers using Heathrow seem to have recorded longer trips during 2004 than the proceeding year. Those travelling on domestic services throughout the UK for business have increased their average trip length from 3.5 days to 7.3 days. While those travelling on scheduled international services for leisure purposes trip lengths have increased from 13.6 to 15.0 days.

Income and Socio-Economic Group ^(T16, T17)

Foreign business passengers on domestic trips had slightly higher average incomes (£82,752) than their UK counterparts (£72,648).

Just under 69% of UK business passengers using the airport came from socio-economic groups A/B and increase from the 66% recorded during 2003. Since 2003, there has been a marginal decrease in the proportion of C1/C2 passengers recorded but with a slight increase in the proportion of D/E's.

Considering leisure passengers, there appears to be a marked increase in the proportion of A/B's, up from 40% to 46%.

Family Make-Up ^(T18)

Considering all UK leisure passengers, irrespective of the service they take, 17% reported that they had children under the age of 16 years.

Business Travel ^(T19)

Around 33% of foreign business passengers were working in the production industries, this represents a small increase from 32% recorded during 2003. The proportion of UK business passengers from this sector also increased this time from 29% in 2003 to 30% in 2004.

The proportion of UK passengers travelling in the public service sector fell slightly from 18% in 2003 to 17% last year. There was a corresponding rise in the proportion of UK passengers engaged in Banking & Finance, up from 26% to 27%.

Journey Purpose and Sex of Passenger ^(T20, T21)

In 2003, travelling on international services, 66% of foreign passengers were travelling on leisure and 34% on business. By 2004 the proportion of foreign passengers travelling on business (domestic and international) had dropped slightly from 54% to 52% with a corresponding change in leisure passengers.

Age ^(T23)

The average age of UK leisure passengers was 41 as were their foreign leisure counterparts.

The average age of UK business passengers was just over 41 as was their foreign counterparts. As was reported in 2003, UK business passengers in the "35-44" age group continued to dominate, accounting for just over 35%.

First Time Fliers ^(T34)

First time fliers at Heathrow during 2004 all appeared to be travelling for leisure purposes.

Chapter 4

Luton Airport

Introduction

Luton Airport, operated by TBI, is situated about 25 miles to the north of London.

Traffic Patterns ^(T1-T2)

Luton Airport handled just over 7.4 million passengers in 2004, 21.7% on domestic and 78.3% on international services. This compares with the 6.8 million reported during 2003, which comprised of 25% on domestic and 75% on international services.

Passenger Profile ^(T3)

95% of passengers using Luton were terminating in 2004 compared with the 93% reported in 2003.

Leisure traffic continued to dominate Luton, with around 77% of all passengers travelling in 2004 reporting they were flying for leisure purposes, an increase from the 76% recorded the year before. This would tend to imply that the traffic increase observed at Luton between 2003 and 2004 was primarily leisure terminating passengers.

Business traffic accounted for the remaining 23% in 2004.

Surface Origin ^(T6-T8)

Luton Airport is served directly from the M1, which in turn has arterial connections to a number of other motorways.

The majority of terminating passengers using Luton Airport begin their surface journey from the South East planning region. In fact the proportion of terminating passengers originating from the South East has increased from 77% in 2003 to 79% in 2004. The Midlands continued to supply the majority of remaining terminating passengers, accounting for 13% in 2004.

Surface Access Modes ^(T9)

The proportional share of modes of transport used seems largely unchanged from 2003, with private car still dominating at around 60%. Rail usage at Luton has increased over the years, and accounts for around 1 in 4 passengers in 2004.

Trip Length ^(T15)

The average trip length of UK business passengers travelling on international scheduled services was just under 3 days, with around 33% having a trip length of 24 hours or less.

Just over 48% of UK business passengers travelling on domestic services were taking trips of 24 hours or less, an increase from the 48% recorded during 2003.
Income and Socio-Economic Group ^(T16, T17)

Foreign business passengers on domestic trips had significantly higher average incomes (£74,709) than their UK counterparts (£54,382).

Just over 50% of UK business passengers using the airport came from socio-economic groups A/B and around 42% from the C1 group. For UK leisure passengers 34% came from the A/B socio-economic group with around 41% coming from the C1 group.

Family Make-Up ^(T18)

Considering all UK leisure passengers, irrespective of the service they take, around 19% reported that they had children under the age of 16 years.

Business Travel ^(T19)

Around 47% of foreign business passengers were working in the production industries, this represents an increase from 45% recorded during 2003. The proportion of UK business passengers from this sector has remained more constant, with only a small fall being recorded from 28% in 2003 to 27% in 2004.

The proportion of UK passengers travelling in the public service sector fell slightly from 18% in 2003 to 17% in 2004. On the other hand there was a noticeable shift in the proportion of UK passengers involving in the Banking sector, up from 17% in 2003 to 21% in 2004.

Journey Purpose and Sex of Passenger ^(T20, T21)

In 2003, travelling on international services, 71% of foreign passengers were travelling on leisure and 29% on business. By 2004 the proportion of foreign passengers travelling on business (domestic and international) had dropped slightly from 26% to 24% with a corresponding change in leisure passengers.

Age ^(T23)

The average age of UK leisure passengers was 43 while foreign leisure passengers on average were a little younger at 37.

The average age of UK business passengers was just under 41 again with foreign business passengers being younger on average at 38. As was reported in 2003, UK business passengers in the "35-44" age group continued to dominate, though the share has risen from 32% in 2003 to accounting for just over 35% in 2004.

First Time Fliers ^(T34)

Out of all the airports surveyed during 2004, Luton appears to attract the highest proportion of first time fliers. The most significant share could be found in charter Inclusive Tour services with slightly over 2% of traffic flying for the first time. Scheduled flights also attracted new users, with just over 1% flying for the first time.

Chapter 5

Manchester Airport

Introduction

Manchester Airport, operated by the Manchester Airport Group Ltd, is situated about 15 miles to the South West of Manchester.

Traffic Patterns ^(T1-T2)

Manchester Airport handled just over 21 million passengers in 2004, 16% on domestic and 84% on international services. This compares with the 18.6 million reported during 2003, which comprised of 16% on domestic and 84% on international services.

Passenger Profile ^(T3)

96.7% of passengers using Manchester were terminating in 2004. A similar proportion was recorded during 2003.

Leisure traffic continued to dominate Manchester, with around 80% of all passengers travelling in 2004 reporting they were flying for leisure purposes, similar to 2003.

Business traffic accounted for the remaining 20% of traffic in 2004.

Surface Origin ^(T6-T8)

Manchester Airport is in close proximity to the M6, which in turn has arterial connections to a number of other motorways.

The majority of terminating passengers using Manchester Airport begin their surface journey from the North West planning region. The proportion of terminating passengers originating from the North West appears to have fallen from 67% in 2003 to around 60% in 2004. This in turn has been offset by an increase in the proportion of surface traffic from the Yorkshire & Humberside, up from 17% in 2003 to nearly 20% last year.

Surface Access Modes ^(T9)

Passengers travelling to Manchester by surface means have a number of options available to them. The proportional use of private car seems to have increased slightly over the last few years, up from 57% in 2003 to nearly 60% in 2004. This in part may be explained by the greater amount of surface traffic from the Yorkshire & Humberside region.

Rail usage and taxi/minicab usage seem largely unaltered, but there has been a slight fall in the proportion of traffic using buses and coaches, down from 3.6% to around 2%.

Trip Length ^(T15)

The average trip length of UK business passengers travelling on international scheduled services was just over 5 days, with around 13% of foreign business having a trip length of 24 hours or less.

Over 51% of UK business passengers travelling on domestic services were taking trips of 24 hours or less, a slight fall from the 55% recorded during 2003.

Not surprisingly leisure passengers' trips were longer than their business counterparts, with over 29% of UK holiday makers travelling on scheduled international services being away between one and two weeks.

Income and Socio-Economic Group ^(T16, T17)

Foreign business passengers on domestic trips had slightly lower average incomes (£59,301) than their UK counterparts (£59,970).

Just under 68% of UK business passengers using the airport came from socio-economic groups A/B and around 28% from the C1 group. For UK leisure passengers 32% came from the A/B socio-economic group with around 35% coming from the C1 group. Generally proportions observed seem largely unaltered from 2003.

Family Make-Up ^(T18)

Considering all UK leisure passengers, irrespective of the service they take, 21% reported that they had children under the age of 16 years.

Business Travel ^(T19)

Around 55% of foreign business passengers were working in the production industries, this represents a slight fall from the 56% recorded during 2003. The proportion of UK business passengers from this sector also fell slightly, this time from 40% in 2003 to 38% in 2004.

The proportion of UK passengers travelling in the public service sector fell from 19% in 2003 to 17% in 2004. There was a corresponding increase in the proportion recorded employed in the Banking sector, up from 16% in 2003 to 19% in 2004.

Journey Purpose and Sex of Passenger ^(T20, T21)

In 2003, travelling on international services, 60% of foreign passengers were travelling on leisure and 40% on business. By 2004 the proportion of foreign passengers travelling on business (domestic and international) had increased slightly from 28% to 29% with a corresponding change in leisure passengers.

Age ^(T23)

The average age of UK leisure passengers was 42 as it was for their foreign leisure counterparts.

The average age of UK business passengers was just under 41.4 while their foreign business counterparts were slightly younger at 41. As was reported in 2003, UK

business passengers in the “35-44” age group continued to dominate, accounting for just over 34% in 2004.

First Time Fliers ^(T34)

Around 1% of passengers using Manchester Airport in 2004 were flying for the first time. Charter services appeared to attract the highest proportion of first time fliers.

Chapter 6

Stansted Airport

Introduction

Stansted Airport, operated by BAA, is situated about 30 miles to the North East of London.

Traffic Patterns ^(T1-T2)

Stansted Airport handled just over 20.9 millions passengers in 2004, 13% on domestic and 87% on international services. This compares with the 18.7 million reported during 2003, which comprised of 14.4% domestic and 85.6% international.

Passenger Profile ^(T3)

87% of passengers using Stansted were terminating in 2004 compared with the 86% reported in 2003.

Leisure traffic continued to dominate Stansted, with around 82% of all passengers travelling in 2004 reporting they were flying for leisure purposes. A similar proportion was recorded during 2003.

Business traffic accounted for the remaining 18% of traffic in 2004.

Surface Origin ^(T6-T8)

Stansted Airport is served directly by the M11, which in turn has arterial connections to a number of other motorways.

The majority of terminating passengers using Stansted Airport begin their surface journey from the South East planning region. The proportion of terminating passengers originating from the South East has increased from 71% in 2003 to 74% in 2004. East Anglia continue to provide the majority of remaining surface traffic, falling slightly from 14% in 2003 to around 12% in 2004.

Surface Access Modes ^(T9)

The use of private car travel to Stansted Airport has slightly fallen from 2003 where around 50% of passengers used this mode, to nearer 48% that was recorded during 2004.

The proportion of passengers electing to use rail seems largely unaltered over the last few years, continuing to account for around 29% of use. The use of buses and coaches has slightly increased since 2003, up from 10.2% to 11.4%

Trip Length ^(T15)

The average trip length of UK business passengers travelling on international scheduled services was just under 4 days, with around 14% having a trip length of 24 hours or less.

Over 42% of UK business passengers travelling on domestic services were taking trips of 24 hours or less, an increase from the 40% recorded during 2003.

Not surprisingly leisure passengers' trips were longer than their business counterparts. UK leisure passengers, travelling on scheduled international flights, tended to have shorter trips than similar groups of passengers using the other London airports.

Income and Socio-Economic Group ^(T16, T17)

Foreign business passengers on domestic trips had slightly higher average incomes (£58,219) than their UK counterparts (£57,252).

Around 46% of UK business passengers using the airport came from socio-economic groups A/B and around 51% from the C1 group. For UK leisure passengers 37% came from the A/B socio-economic group with around 43% coming from the C1 group.

Family Make-Up ^(T18)

Considering all UK leisure passengers, irrespective of the service they take, 17% reported that they had children under the age of 16 years.

Business Travel ^(T19)

Around 32% of foreign business passengers were working in the production industries, this represents a fall from the 35% recorded during 2003. The proportion of UK business passengers from this sector has remained fairly stable at 30% over the last few years.

The proportion of UK passengers travelling in the public service sector has hardly changed over the last few years, staying at around 22%. There has been a noticeable increase in the proportion of UK business traffic employed in the Transport & Communications sector, up from 13% to 19%.

Journey Purpose and Sex of Passenger ^(T20, T21)

In 2003, travelling on international services, 85% of foreign passengers were travelling on leisure and 15% on business. By 2004 the proportion of foreign passengers travelling on business (domestic and international) had increased from 29% to 34% with a corresponding change in leisure passengers.

Age ^(T23)

The average age of UK leisure passengers was 42 with their foreign leisure counterparts being somewhat younger on average at 38. A similar pattern was observed in 2003.

The average age of UK business passengers was just under 41 while their foreign business counterparts were again a little younger at 39. As was reported in 2003, UK business passengers in the "35-44" age group continued to dominate, accounting for just over 32% in 2004.

First Time Fliers ^(T34)

Less than 1% of passengers using Stansted Airport in 2004 were flying for the first time. Charter services appeared to attract the highest proportion of first time fliers.

SUMMARY

LONDON

This executive summary deals with the London¹ airports, Gatwick, Heathrow, Luton and Stansted. Gatwick and Heathrow Airports have been part of the London Continuous Airport survey since 1997. In 2000 Luton and Stansted joined as Continuous Airports.

London City Airport was not included in the 2004 Survey, last being surveyed in 2003 and 2001.

Overall Market

In 2004, the London airports handled just under 127 million passengers, accounting for 58% of all passengers using UK airports. Closer examination of the underlying make-up of the type of traffic revealed that the relative strength of the market share of the London airports which is assisted by the level of interlining.

Just over 90% of traffic using London is scheduled, of which 87% represents international travel, with the balance being domestic. The proportion of domestic passengers has remained at around 13%.

Both Gatwick and Stansted have experienced a decline in the proportion of domestic traffic, down from 13% to 12% at Gatwick and from 14% to 13% at Stansted.

There have been fewer changes at Heathrow Airport with 10% domestic and 90% international over this period, similar to the proportions observed during 2003. At Luton Airport, the proportion of international passengers continues to increase, up from 75% observed during 2003 to 78%, a trend that seems to have begun back in 2000.

The proportion of non-UK residents using the London area airports was 38% in 2004. At Gatwick, the overall proportion of non-UK residents fell from 38% in 2002 to 24% in 2004. Heathrow was far more stable, falling slightly from 56% to 55%. Both Stansted and Luton experienced a growth in the proportion of non-UK residents, up at Stansted from 27% to 36% while at Luton it was up from 19% to 22%.

Transfer Market

Around 24% of traffic using the London area airports was connecting from another service, while the balance of 76% was terminating. This represents a slight fall in the proportion of connecting traffic, down from the 26% recorded during 2002.

Around one in three passengers continued to change flights in 2004 at Heathrow, at Gatwick 14% of passengers changed planes whilst at Stansted the proportion continued to increase between 2002 and 2004 from 9% to 12%, though this represents a slight fall in proportion from the 15% recorded during 2003.

¹ The London area airports constitute Gatwick, Heathrow, London City, Luton and Stansted. London City Airport was not surveyed in either 2004 or 2002. For this reason, comments relating to London area airports will use 2002 as the base year for comparable purposes.

Of those passengers connecting at London, 16% were flying on to a domestic point with the remaining 84% joining an international service.

The proportion of non-UK residents connecting at the London Airports has slightly fallen from 79% in 2000 to 77% in 2004. This is clearest at Gatwick, with a fall from 72% in 2000 to 53% in 2004, up from the 50% recorded during 2003, which may partially be explained by the transfer of British Airways services to Heathrow. The proportion of non-UK residents connecting at Heathrow has remained fairly constant over this period, despite the world terrorist experiences of 2001, at around 83%, slightly up from the 82% recorded during 2003. Stansted has experienced a growth in this market, up from 55% in 2000 to 65% in 2004.

Of those passengers connecting, 26% were travelling for business purposes, a decline from the 30% recorded during 2000. This decline in the proportion of connecting business traffic can be seen at each of the three main London Airports, Stansted (17% to 13%), Gatwick (29% to 24%) and Heathrow (30% to 28%).

The proportion of passengers interlining at Luton has fallen from 6.6% in 2003 to 4.6% in 2004.

Terminating Market

The London terminating market represents around 95.5 million passengers in 2004.

There has been a slight increase since 2002 in the proportion of foreign passengers terminating at the London Airports, up from 30% to 31%.

At Heathrow the proportion of foreign terminating residents decreased from 40% in 2002 to 39% in 2004. At Gatwick, Luton and Stansted the reverse was true, with the proportion of foreign residents increasing at Gatwick from 19% to 20%, at Luton from 14% to 21% and finally at Stansted 27% to 32%, up from 29% recorded during 2003.

Around 32% of the scheduled terminating market was made up of business traffic consistent with the proportion that was observed in 2002, though this does represent a fall from the 37% reported in 2000. Heathrow still continued to meet the demand of the majority of this market, with around 40% of its traffic being scheduled terminating business, around 17.5 million passengers in 2004.

At Gatwick, the proportion of terminating passengers that travel on scheduled services for business has fallen slightly since 2000 from 29% to 25% in 2002 and then again to 23% last year. A more noticeable change can be seen at Stansted, from 22% in 2002 to around 20% in 2004. Luton has also seen a downturn in the proportion of terminating business passengers carried on scheduled services, down from 30% in 2002 to 26% in 2004.

Charter traffic has traditionally suggested trips for non-business purposes. The London area airports are no exception, with over 99% of all charter flights serving the UK leisure market. Non-UK residents make up only 3% of this market, although this does represent a fall from the 5% recorded during 2000.

There are no significant charter operations at Heathrow Airport.

Ground Origins

The London terminating market represents around 95.5 million passengers in 2004.

Around 11% of these passengers were travelling on domestic services, with 89% international flights. Around 70% of terminating passengers were UK residents, a similar proportion was recorded during 2002.

Considering initially the scheduled market, the proportion of passengers using the London Airports that started their journey from outside the South East is around 18% a similar proportion was observed during 2002.

Clearly the vast majority of passengers using the London airports continue to live or work in the South East. The South West and East Anglia continue to be the two regions predominantly generating terminating passengers from outside the South East. They accounted for around 10% of the scheduled terminating market, again a similar proportion was observed during the 2002 survey.

Looking at the London terminating market as a whole, Heathrow continues to meet the demands of most scheduled passengers with 52% share of the market, though it should be appreciated that this represents a fall from 2000, when it had over 60% of this market. The other three surveyed London airports remain similar to that observed during 2003, Gatwick and Stansted at 19% and Luton at 7%.

The charter market appears to have a wider sphere of influence, with around 23% of terminating passengers travelling from points outside the South East, a slight drop from that recorded during 2003. As for the distribution of this traffic, there has been little change since 2000, with around 6.5% of traffic from the South West, down from 8% in 2003, 8% from East Anglia and 6% from the Midlands.

Gatwick continues to dominate the charter market, increasing its share of London from 81% in 2000 to 84% in 2004, a slight drop from the 85% recorded last year. Luton's share has slipped from 2000 from 10% to 7% as was observed last year. On the other hand Stansted's market share remains stable at 9% of the London charter market.

As was observed last year, the fact that the London Area Airports circle the London conurbation suggest that surface passengers travelling from outside the South East have an element of choice regarding which airport they use. Looking at the scheduled and charter market together, passengers from East Anglia tend to favour the use of Stansted Airport (48%), followed by Heathrow (22%) and Gatwick at (22%, up from the 17% recorded in 2003) in that order.

Traffic from the South West seem clearly seem to make their way towards either Heathrow (54%) or Gatwick (33%) in the same way as was observed during 2003. Traffic from the Midlands looking for scheduled services tend to favour Heathrow or Stansted predominately, however if a charter service is required then Gatwick becomes first choice.

Surface Access

Of the 95 million terminating passengers using the London Airports by surface, over 35% used public transport, this represents a slight increase from the 34% recorded during 2003. The overall use of private car has increased from 42% in 2000 up to 44% in 2004. The use of hire vehicles has remained largely unaltered at 3% of the terminating market. The decline in taxi/minicab usage observed in 2003 seems to have levelled at 18%, down from the 21% recorded four years ago.

At Gatwick the use of private cars increased from 50% in 2003 to 51% in 2004. The relative use of taxis and minicabs remain unchanged at 14.5%. At Heathrow there was little change with 35% of passengers recorded using private cars, a small decline from the 36% recorded in 2003. The number of passengers using public transport at Heathrow rose slightly from 35% to 36%.

The decline in the proportion of passengers using private car at Stansted continued, falling from 50% in 2003 to 48% in 2004. The proportion of terminating passengers using rail services at Stansted remained largely unaltered from 2003 at 29%. Coach and bus usage was however slightly up on the levels observed in 2003 from 10% to 11%.

The rail station at Luton Parkway continues to meet the demand of about one passenger in four, with passengers using the courtesy bus services to reach the terminal building. The proportion of passengers using taxi or minicabs remains stable at around 12%.

Business Travel

Business travel is still of key importance to the London Airports, with under 27 million passengers travelling through London each year for business purposes. UK residents accounted for around 64% of business travel through London airports, an increase in the 53% recorded during 2003.

Production industries accounted for just less than 31% of business traffic through the London Airports, with the remaining 69% coming from the non-production sectors. Banking and Finance dominated this sector with 22% of the business market followed by 19% Government and 14% Communications.

Socio-economic Group

Around 61% of terminating UK business passengers using the London Area Airports were from socio-economic groups A or B as was observed during 2003. The proportion of UK leisure passengers from the A/B group rose from 35% in 2003 to 40% in 2004.

Over 68% of UK business passengers at Heathrow Airport were from socio-economic groups A or B, this compares with the 66% observed during 2003. The proportion of UK business passengers from these groups at Gatwick remain largely unaltered at 55%, while Luton was up from 48% to 50% and Stansted down from 48% to 46%.

The proportion of UK leisure passengers from socio economic groups A or B was 46% at Heathrow, up from the 40% recorded during 2003. The proportion observed at Luton remained at around 33% however at Gatwick and Stansted the proportion rose from the 33% observed in 2003 to 37%.

Group Size, Trip Length & Gender

The majority of terminating passengers using the London Area Airports were travelling alone (52%).

Considering the London Airports as a whole, UK business passengers on international services were away on average 4 days, while foreign business passengers slightly longer at 4.5 days.

UK residents on international business trips tended to involve at least one overnight stay with less than 15% of passengers at Gatwick, Heathrow or Stansted being away for less than 24 hours.

The proportion of business passengers that were women at Heathrow remained at 23% as observed during 2003.

Considering just terminating traffic, more men than women travelled for both business and non-business reasons (76% male), though the differential was very much less when only non-business traffic was considered (50% male).

As observed in 2003, UK residents, taking leisure breaks, tended to take slightly longer trips when using Gatwick as opposed to Stansted. When an international scheduled flight was taken, the average holiday length was 7 days at Stansted but 10 days at Gatwick.

Income Profile

The average UK salary recorded at the London area airports was £57,500, slightly up on the £55,500 recorded in 2003, with the average foreign salary being higher but consistent with 2003 at £62,000.

The average UK business individual income recorded at the London Airports was £74,500, with non-UK business residents earning slightly more at £79,000. The average UK leisure household income was £51,000, with their non-UK counterparts earning around £52,000.

UK residents travelling on international business trips and using Heathrow tended to earn more than their counterparts at Gatwick, £88,000 verses £66,000. Foreign business passengers travelling on domestic services from Luton tended to earn on average more than their UK counterparts at the other London Airports, with the exception of Heathrow.

Age Profile

At the London Airports, the average age of UK business passengers was found to be around 41 years as observed in 2003. UK leisure passengers tended to be slightly older, with an average of 42 years being recorded.

There was little variation in the average age UK passengers at the London airports, with Heathrow recording the youngest passengers 41 years and Luton the oldest at 42 years.

SUMMARY

NORTH WEST

The 2004 origin/destination survey conducted at Manchester Airport forms part of the Continuous Survey that has been run since 1997.

Traffic Levels and Type of Passengers

In 2004, Manchester handled under 21 million passengers, accounting for around 10% of all passengers using UK airports. A little over 3% of passengers change flights in 2004 at Manchester.

The proportion of passengers using domestic services at Manchester has remained constant since 2003 at around 16%. The scheduled market continued to grow at Manchester, with the share of international flights increasing from 43% last year to 48% in 2004.

The proportion of foreign residents using the airport remained similar to the 2003 level at around 15%.

The market share of business passengers at Manchester remained at 20%.

Surface Origin/Destination

The pattern of surface origin/destination at Manchester has changed with 40% of terminating passengers travelling to or from points outside the North West region in 2004 as opposed to 33% in 2003.

There has been an increase in the proportion of UK scheduled flights from 52% in 2003 to 56% in 2004.

Surface Access

The number of passengers recorded using private cars at Manchester slightly increased from 58% in 2003 to 60% in 2004. There was a decrease in the number of passengers using public transport, down from 10% to 9%, with the share of passengers using buses/coaches falling from 4% in 2003 to 2% in 2004.

The demand for taxis remained unchanged at 29%, as did the use of rail at 7%.

Business Travel

The proportion of UK business passengers from the non-production industries has increased from 44% in 2003 to 62% in 2004. Banking and finance was the predominant business sector in 2004 with almost 20% of UK business passengers falling into this category, compared with 17% in 2003.

Socio-economic Group

The highest proportion of UK business passengers at Manchester was from socio-economic groups A and B at 68%, a slight increase from the 68% recorded in 2003. The proportion of UK leisure passengers from socio-economic groups A/B is 32%. The percentage of UK leisure passengers is highest in socio-economic group C1 at 35%.

Sex, Group Size and Trip Length

The proportion of women travelling on business in 2004 increased slightly to 12% at Manchester from 11% in 2003. For UK scheduled international business passengers, 16% at Manchester were away for 24 hours or less, with the highest proportion of passengers at 20% were away for 1 to 2 days.

Age and Family Make-up

The average age of UK business passengers rose from 40 years in 2003 to 42 years in 2004. A similar increase was observed in the average age of UK leisure passengers up from 38 years to 41 years.

The proportion of UK leisure passengers with no children under 16 years living in the household was 79% at Manchester, an increase from the 74% recorded in 2003.

Income

UK business passengers on international journeys earned on average £60,000, up from the £55,000 recorded during 2003. The average household income of their UK leisure counterparts was more consistent, rising from £36,000 in 2003 to nearer £37,000 in 2004.

Appendix B

Sampling Techniques & Questionnaire

The Continuous survey ran between January and December 2004 at Gatwick, Heathrow, London City, Luton, Manchester and Stansted. Shifts were selected so that during each sub period, each shift (e.g. Monday am) was sampled approximately the same number of times.

Primary Sampling Technique

At all airports only departing passengers were interviewed, previous surveys having shown that differences in characteristics of arriving and departing passengers were not significant.

Teams of interviewers positioned themselves in a gate room or at the entrance to the departure lounge and one interviewer counted the passengers as they entered, across a predetermined line, and every third or fifth passenger was selected for interview. If an interviewer was not immediately available, then the contact was handed an identification card and then approached as soon as an interviewer became free. All passengers were counted, apart from children less than two years of age.

A constant monitor of sampled flights was maintained throughout the year to ensure that as far as possible all routes, and in most cases individual flights, were covered regularly throughout the survey.

It was assumed that those passengers who were candidates for an interview, but who for one of a variety of reasons could not be interviewed, had the same characteristics as those who were successfully interviewed. The overall interviewing success rate for the 2004 survey was 95%.

Illustrative questionnaires have been reproduced in the appendix section together with an identification card.

Alternative Sampling Technique

The notes below will summarise a regional survey technique used to ensure that a passenger is selected at random for interview. This technique can be used irrespective of the number of team members present.

The interviewing area where passengers or customers are to be found should be clearly defined to all team members present. A good example maybe an airside departure lounge or gateroom where passengers reside before being directed to a nominated gateroom to board their flight. At smaller airports, such as Inverness, it may be possible to interview airport users prior to check-in (Landside).

The interviewing area should be divided into a number of virtual areas, dependent upon the number of team members available to interview. If there are 4 team

members, the interviewing area should be divided into quarters, where there are only three team members, then the area should be divided into thirds and so on.

An interviewer will then be assigned an area. It will then be that interviewer's responsibility to sample passengers who move into their area.

It is of key importance that interviewers do not avoid certain passengers and show any bias or favouritism to any other groups of passengers. The sampling technique demands that a representative group of passengers be sampled.

On selecting the first passenger (perhaps to the extreme left of the interviewing area) the interviewer will run through the questionnaire in the normal manner. On the completion of this interview, the interviewer will then count three more passengers towards the right. The third passenger counted, assuming that they are eligible for interview will then be interviewed. Once this interview has been completed, the interviewer will then count a further three passengers and begin the process again.

Adopting this technique will enable interviewers the freedom to work in a relatively large area without the need for a counter to indicate the next passenger to be sampled. Routine checks will be conducted on a monthly basis, to ensure the integrity of the data is maintained.

The interviewing areas can be redefined during busy or quiet periods directly inline with the number of team members available to work. As in all other sampling methodologies, the same passenger cannot be interviewed twice on the same shift.

[REDACTED]

Appendix C

Weighting Techniques

The sampling and weighting of the 2004 survey was conducted on a route-by-route basis at each of the survey airports.

The first stage was to list all scheduled routes operated in and out of the airports by airline and flight number and list all charter routes by airline and destination. The various airport authorities then provided uplift/discharge figures for each month of the survey. The routes were initially broken down by airlines into single sector and multi sector groups.

For single sector routes the number of passengers interviewed were added together and divided into the respective monthly figures to obtain the weights. On multiple sector routes, weighting was undertaken by departing flight number. If flights took different routes on different days as well they were weighted by final destination of the aircraft. Where multi sector and single sector flights were in operation on the same routes they were divided into separate categories.

In the majority of cases multi sector routes were unique and therefore weighted separately and when multi sector routes were combined they were usually for flights stopping at the same points.

As some flights operated at times when shifts were not run e.g. diversions and most domestic charter flights, the weighted survey totals were different from those published in 2004 annual statistics as described earlier.

Appendix D

Definitions

Passengers' use of airport

Terminating passengers are passengers who arrive at or depart from an airport by surface modes of transport. Transfer passengers are passengers who change aircraft at the airport and have no other reason for visiting the airport. They can be divided into international-to-international, international to domestic, domestic to international and domestic-to-domestic Transfer passengers. A Transfer passenger constitutes two passenger movements, one arrival and one departure. A passenger interlining from one international flight to another counts as two international passenger movements. A passenger interlining from a domestic flight to an international flight counts as one domestic movement and one international movement.

There are two distinct types of international-to-international Transfer passengers - airside Transfer and landside Transfer. Airside Transfer passengers do not pass through immigration and landside passengers do pass through immigration. Transit passengers are passengers who arrive and depart on the same flight. These passengers do not pass the interview point and normally remain on the aircraft. Terminal passengers are those passengers who join or leave a flight at an airport; they include all passengers with the exception of transit passengers. The diagram below shows how the classifications are connected.

Origin/destination

Where a journey has been broken for a reason other than transit, it is considered to restart or finish at that point. The following examples illustrate the definition.

"Passenger A leaves home in Swansea, travels to Reading, has lunch and then flies out from Heathrow Airport."

This passenger's origin would be Swansea as their reason for being in Reading was transit.

"Passenger B, from Watford, travels to Amersham, has a business engagement, then goes onto Gatwick Airport and flies to Paris."

This passenger's origin is classified as Amersham as her journey has been broken for a reason other than transit. A transit stop is defined as the point at which a passenger chooses to break his journey to the airport, the main reason for doing so being to rest, e.g. using airport hotels prior to early morning flights, calling in on or staying with relatives etc.

For the purpose of analysing the origins and destinations within the United Kingdom of terminating passengers, regions, areas and zones have been defined in terms of boundaries of, respectively, economic planning regions, counties and district council areas. The area of residence of UK residents was recorded using the same zonal system.

UK and foreign passengers

A passenger is classified as a UK resident if the UK is the country in which he has lived for most of the last twelve months. Those resident in a country outside the UK are classified as foreign residents.

Business and leisure passengers

Journey purpose is classified as business or leisure in the following way.

Business

- Business
- Attending internal company business
- Meetings with customers/others
- Conference/Congress
- Trade Fair/Exhibition
- Armed Services
- Airline Staff
- Contract Home Leave
- Overseas Employment - Less than 12 months
- Overseas Employment - 12 months or more
- Studies paid by employer - Formal academic course
- Studies paid by employer - Other
- Au Pair

Leisure

- Holiday - Fare paid separately
- Holiday - IT/Package-Hotel
- Holiday - IT/Package-Self Catering
- Holiday - IT/Package-Cruise
- Visiting friends and relatives
- Migration
- Studies (private/grants)-Formal academic course
- Studies (private/grants)-Other
- Cultural/sports
- Unaccompanied school children
- Other

A further breakdown for passengers on skiing holidays was also included.

Domestic and international passengers

A passenger is classified as domestic if his flight is between two points both of which are in the UK (including the Channel Islands). Otherwise he is classified as international.

Modes of transport

Mode of transport refers to the mode of surface transport used to get to the airport, which for outward air passengers was their last three modes of transport.

Socio-economic group

The occupation group job dictionary produced by the Market Research Society was used to grade passengers.

Main Business

The SIC classification is used to code this information.

Tabular Means

In three of the tables that can be found in this report means have been calculated to represent mean trip length (days), mean income (GBP) & mean age (yrs). The mean category limits used to create these tables were trip length (49 days) for trips over 4 weeks, income (GBP 300,000) for income greater than £230,000 and age (80 yrs) for passengers older than 74 years.

Appendix E

History

Although a brief outline of the survey history can be found in the introduction a list of the surveys that have been conducted during 1996 - 2003 can be found below. If you would require any further information about any of these surveys, please feel free to contact us.
